### **Cautions and Limitations**

This diagnostic is not intended to replace the advice of public health authorities or government entities. It is designed to support institutional strategic thinking and planning, not to provide industry health and safety guidance. Health and safety standards are established by relevant public health authorities along with federal, regional, and local government mandates. These standards and mandates are subject to revision as new research emerges and the pandemic evolves. A compilation of sources and the date of their publication that guided the development of this diagnostic can be found at the end for reference.

### **About EAB**

At EAB, our mission is to make education smarter and our communities stronger. We harness the power of more than 1,500 institutions to uncover and apply proven practices and transformative insights. From primary school to higher education and beyond, EAB partners with education leaders to accelerate progress and drive results in three key areas: enrolment, student success, and institutional strategy. For more information, visit eab.com.

#### Legal Caveat

EAB Global, Inc. ("EAB") has made efforts to verify the accuracy of the information it provides to partners. This report relies on data obtained from many sources, however, and EAB cannot guarantee the accuracy of the information provided or any analysis based thereon. In addition, neither EAB nor any of its affiliates (each, an "EAB Organization") is in the business of giving legal, accounting, or other professional advice, and its reports should not be construed as professional advice. In particular, partners should not rely on any legal commentary in this report as a basis for action, or assume that any tactics described herein would be permitted by applicable law or appropriate for a given partner's situation. Partners are advised to consult with appropriate professionals concerning legal, tax, or accounting issues, before implementing any of these tactics. No EAB Organization or any of its respective officers, directors, employees, or agents shall be liable for any claims, liabilities, or expenses relating to (a) any errors or omissions in this report, whether caused by any EAB Organization, or any of their respective employees or agents, or sources or other third parties, (b) any recommendation by any EAB Organization, or (c) failure of partner and its employees and agents to abide by the terms set forth herein.

EAB is a registered trademark of EAB Global, Inc. in the United States and other countries. Partners are not permitted to use these trademarks, or any other trademark, product name, service name, trade name, and logo of any EAB Organization without prior written consent of EAB. Other trademarks, product names, service names, trade names, and logo used within these pages are the property of their respective holders. Use of other company trademarks, product names, service names, trade names, and logos or images of the same does not necessarily constitute (a) an endorsement by such company of an EAB Organization and its products and services, or (b) an endorsement of the company or its products or services by an EAB Organization. Ne EAB Organization is affiliated with any such company.

#### IMPORTANT: Please read the following.

EAB has prepared this report for the exclusive use of its partners. Each partner acknowledges and agrees that this report and the information contained herein (collectively, the "Report") are confidential and proprietary to EAB. By accepting delivery of this Report, each partner agrees to abide by the terms as stated herein, including the following:

- All right, title, and interest in and to this Report is owned by an EAB Organization. Except as stated herein, no right, license, permission, or interest of any kind in this Report is intended to be given, transferred to, or acquired by a partner. Each partner is authorized to use this Report only to the extent expressly authorized herein.
- Each partner shall not sell, license, republish, distribute, or post online or otherwise this Report, in part or in whole. Each partner shall not disseminate or permit the use of, and shall take reasonable precautions to prevent such dissemination or use of, this Report by (a) any of its employees and agents (except as stated below), or (b) any third party.
- 3. Each partner may make this Report available solely to those of its employees and agents who (a) are registered for the workshop or program of which this Report is a part, (b) require access to this Report in order to learn from the information described herein, and (c) agree not to disclose this Report to other employees or agents or any third party. Each partner shall use, and shall ensure that its employees and agents use, this Report for its internal use only. Each partner may make a limited number of copies, solely as adequate for use by its employees and agents in accordance with the terms herein.
- Each partner shall not remove from this Report any confidential markings, copyright notices, and/or other similar indicia herein.
- Each partner is responsible for any breach of its obligations as stated herein by any of its employees or agents.
- If a partner is unwilling to abide by any of the foregoing obligations, then such partner shall promptly return this Report and all copies thereof to EAB.

## How to Use This Diagnostic

To assist leaders in the unprecedented challenge of safely repopulating campus this autumn, EAB developed a diagnostic focused on COVID-19 containment and campus de-densification. This diagnostic evaluates your institution's readiness to implement seven key mitigation strategies.

These strategies fall into two categories based on how they intervene to disrupt COVID-19 transmission. First, containment strategies seek to identify and isolate individual cases as well as their exposure networks. Second, environmental de-risking strategies systematically reduce transmission opportunities when cases slip through the containment net.

#### Containment

Identifying and Isolating Infections

#### **Environmental De-risking**

Lowering Infection Transmission Opportunities

Symptom Monitoring Have people on campus self-report symptoms

Testing Assess virus load within the community

Ø

Contact Tracing Identify and notify exposed individuals

Quarantine and Isolation (Q/I) Isolate confirmed cases and insulate exposure chains Personal Protective Equipment (PPE) Supply the community and ensure appropriate usage

**De-Densifying Academic Space** *Reduce transmission opportunities in academic facilities* 

**De-Densifying Residential Space** *Reduce transmission opportunities in residential spaces* 

Deploying a combination of these strategies will best limit, although not eliminate, COVID-19 community spread and reduce operating risk for the autumn. While this diagnostic assists in institutional strategic planning, it is not intended to be exhaustive nor to replace the guidance of public health authorities.

### **DIAGNOSTIC INSTRUCTIONS**

### How to Complete the Diagnostic

For each strategy, identify your institution's tier by assessing which corresponding capabilities you will have for the autumn term. You should select the tier that best aligns with your institution's current investment and planning strategy for the upcoming year. If your planned capabilities do not perfectly overlap with the tier descriptions, select the lowest-numbered tier with the greatest overlap. Note your self-assessed tier on the self-assessment document.

### How to Interpret the Results

The tiers plot the relative level of your institution's strategy capabilities. Higher-numbered tiers correspond with greater maturity. As the tiers progress, the assumption is that the added capabilities of the lower tiers are already achieved.

Upon completing the diagnostic, contact your strategic leader (Brett Schenkel, <u>BSchenkel@eab.com</u>) to schedule a consultation with one of EAB's repopulation experts.

### **Before We Begin: Imperatives for Investment**

Each of these seven strategies plays a role in mitigating risk and bolstering institutional readiness for the autumn term. To illustrate the need for investment, we have articulated the primary risk of underinvesting in each component and highlighted the interdependence between them. The risks identified here are not intended to be exhaustive but rather to present the primary consequence and the potential ripple effects of underinvestment.

#### Symptom Monitoring

#### **Risk of Underinvestment**

Without consistent symptom monitoring, levels of influenza-like illness or COVID-19-like illness go undocumented. Mildly symptomatic cases will be less likely to be tested and enter the contact tracing and Q/I apparatus if confirmed to be positive cases.

#### **Contact Tracing**

#### **Risk of Underinvestment**

Contact tracing mitigates community spread by locating exposure networks and moving them into the Q/I infrastructure. It is dependent on robust testing and Q/I capacity to control outbreaks. Low investment in contact tracing will lead to a wasting of testing capacity, as positive cases will not be contained. In addition, there will be no ability to quarantine exposure networks without this capacity.

#### PPE

#### **Risk of Underinvestment**

PPE lowers the number of transmission opportunities and achieves the greatest benefits when applied at scale. Failure to invest in PPE supplies and policies will increase the risk of widespread community transmission, especially in settings where physical distancing is difficult to maintain.

#### Testing

#### **Risk of Underinvestment**

Testing underwrites all other containment activities: it enables the identification of positive and non-positive cases for contact tracing and Q/I. If testing is inadequate, institutions risk undetected and escalating outbreaks that could significantly disrupt campus operations and endanger the university community.

### Quarantine and Isolation (Q/I)

#### **Risk of Underinvestment**

Q/I infrastructure contains confirmed and potential cases. Isolation capacity is the firstorder investment, as it reduces the spread of confirmed cases. Quarantine is second-order but essential to proactively reduce community caseloads. Without adequate Q/I capacity, institutions risk undermining other investments in testing and contact tracing by letting cases spread unfettered.

#### **De-Densifying Academic Space**

#### **Risk of Underinvestment**

Reducing the density of academic spaces helps lessen community transmission within academic settings. Limited or insufficient dedensification increases the likelihood of community spread and the risk of outbreaks that could overwhelm containment capacity.

#### **De-Densifying Residential Space**

#### **Risk of Underinvestment**

Limits on residential facility occupancy can reduce the extent and speed of infection transmission. Without adequate de-densification, an outbreak in a residence hall could quickly accelerate beyond institutional containment capacity.

### Strategy #1: Symptom Monitoring Have People on Campus Self-Report Symptoms Description **Added Capabilities** Institution will not conduct ( ) symptom monitoring • Daily prompts to community members to check for a list of symptoms • Web- or app-based platform to record Conduct optional symptom 1 monitoring screening responses · Education of community on symptoms and need for reporting even mild ones · Policy requires regular symptom reporting Conduct compulsory symptom 2 • Enforcement mechanism or follow-up protocols monitoring do not discourage honest reporting

Health Screening Tier Assessment:

5

## Strategy #2: Testing

### Assess Virus Load Within the Community

	Description	Added Capabilities
0	Institution will not provide a dedicated testing function or protocol on how to test students	
1	Test fully symptomatic cases (e.g., fever, cough, vomiting)	<ul> <li>Sufficient polymerase chain reaction (PCR) testing kits and supplies to cover demand</li> <li>Sample collection sites, personnel, and protocols to conduct tests</li> <li>Appropriate testing licenses and certifications</li> </ul>
2	Test fully and mildly symptomatic cases	<ul> <li>Students with mild to minimal symptoms are able and encouraged to seek testing</li> <li>Symptom reporting identifies potential mild cases and promotes testing</li> </ul>
3	Test all symptomatic cases and conduct a blanket population test upon return to campus	<ul> <li>Sufficient capacity for one-time testing on an institution-wide scale</li> <li>Tests are free to students</li> <li>One-time population testing policy and student compliance mechanisms</li> </ul>
4	Test all symptomatic cases and conduct surveillance testing throughout the semester	<ul> <li>Testing capacity can handle repeated testing of a targeted percentage of university community</li> <li>All subsequent tests are free to students</li> <li>A defined protocol governs whom to test</li> </ul>
5	Test all symptomatic cases, conduct surveillance testing, and offer tests for local/regional community	<ul> <li>Testing capacity can handle both institutional and community volume</li> </ul>

Testing Tier Assessment:

## Strategy #3: Contact Tracing

### Identify and Notify Exposed Individuals

	Description	Added Capabilities
0	Institution will not conduct contact tracing or have external contact tracing resources	
1	Local public health entity contact traces any confirmed positive case (student, faculty, staff) on campus	<ul> <li>Cooperative relationships exist with external contact tracers</li> <li>Information is shared between public health entity and institution on potential cases and exposure networks</li> </ul>
2	Contact trace using university staff for small outbreaks	<ul> <li>Existing staff or new employees, potentially student workers, conduct tracing</li> <li>University personnel are trained on effective contact tracing practices</li> <li>Contact tracers have protocols for interviewing infected individuals</li> <li>Institution establishes mechanism for notifying close and potentially exposed contacts</li> </ul>
3	Contact trace using university staff for large outbreaks	<ul> <li>Number of contact tracers reaches the 30 tracer to 100,000 population ratio</li> <li>Surge capacity of students or redeployed staff to respond to a large outbreak</li> </ul>

Contact Tracing Tier Assessment:

Source: EAB interviews and analysis.

## Strategy #4: Quarantine<sup>1</sup> and Isolation<sup>2</sup> (Q/I)

Isolate Confirmed Cases and Insulate Exposure Chains

Description **Added Capabilities** Institution will not provide either dedicated isolation or quarantine facilities • Designated isolation units are physically separated from other student residencies Isolation units are equipped with private Provide isolation rooms only for bathroom facilities and essential health items students living on campus and (e.g., thermometers) 1 expect all students to guarantine in their existing • Protocols for monitoring and caring for students rooms or at home in isolation are established · Surge capacity procedures are in place in case of widespread outbreak • Quarantine rooms are set aside for students potentially exposed to the virus Provide isolation and guarantine • Protocols exist for monitoring and caring for 2 units only for students living on students in quarantine campus • The ratio between isolation and guarantine units is flexible based on case volume Provide isolation units for all students and guarantine units Capacity exists to isolate a specified percentage 3 only for students living on of student population at any given moment campus Provide isolation and guarantine • Capacity exists to accommodate an exposure units for all students and select network of 7 students to 1 confirmed infection other community members

- 1) Refers to protocols for handing potential or
- 2) Refers to protocols for handing potential or exposed COVID-19 cases
   2) Refers to protocols for handing *confirmed* COVID-19 cases

## Strategy #5: Personal Protective Equipment (PPE)

Supply the Community and Ensure Appropriate Usage

	Description		Added Capabilities
0	Institution will not provide additional PPE to students or staff		
1	Supply PPE to staff charged with responding to COVID cases (e.g., student health, police, emergency management services, etc.)	Þ	<ul> <li>PPE inventory acquired and reliable supply chain secured for the semester</li> <li>National guidelines for PPE protection levels achieved and protocols developed when managing potential or confirmed COVID cases</li> <li>PPE stockpiled for potential surge in use if major outbreak occurs</li> </ul>
2	Supply PPE to all staff who have direct exposure to students or work where robust physical distancing cannot be maintained		<ul> <li>PPE acquired to cover identified constituencies</li> <li>Expectations promulgated on usage and disposal</li> </ul>
3	Supply PPE to all staff and create mask policy for students, especially when physical distancing cannot be maintained		<ul> <li>Mask usage requirement policy developed and communicated to students</li> <li>Students supplied with masks and/or allowed to provide their own</li> </ul>

**PPE Tier Assessment:** 

## Strategy #6: De-Densifying Academic Space

### Reduce Transmission Opportunities in Academic Spaces

	Description	Added Capabilities
0	Institution will not modify academic spaces to account for physical distancing or lower occupancy	
1	Encourage minimal physical distancing	<ul> <li>Signs/reminders encourage students to remain more than 1 m (3 ft) apart in classrooms</li> <li>Signs/reminders encourage students to wear masks</li> </ul>
2	Enforce robust physical distancing and mask-wearing	<ul> <li>Classroom layout modified to create more than 2 m (6 ft) distance between occupants</li> <li>Seats removed or taped-off to prevent non-compliance</li> <li>Students required to wear masks to attend inperson instruction</li> <li>Furniture removed or sectioned off in public spaces to minimise congregation</li> </ul>
3	Account for hygiene, flow, and ventilation	<ul> <li>Ventilation increased to the maximum extent possible</li> <li>Hand sanitizer distributors placed throughout academic spaces</li> <li>Plexiglass barriers constructed for instructors</li> <li>Movement protocols created for student and staff traffic</li> <li>Course schedule adjustments imposed to avoid clustering</li> </ul>

De-Densifying Academic Spaces Tier Assessment:

## Strategy #7: De-Densifying Residential Space

### Reduce Transmission Opportunities in Accommodation Spaces

	Description	Added Capabilities
0	Institution will make no changes to residential occupancy or layout	
1	Q/I facilities take some rooms offline but otherwise remain at nearly 100% capacity	<ul> <li>Quarantine and isolation facilities take some rooms offline, but otherwise residence halls operate at nearly 100% capacity</li> </ul>
2	Bedroom occupancy capped at 2 people per bedroom	<ul> <li>Living arrangements with more than two individuals per room eliminated (e.g., no triple- or quadruple-occupancy in suites)</li> </ul>
3	Building occupancy capped at a specified number of people per bathroom	<ul> <li>Lower ratio of residents to bathrooms or bathroom fixtures imposed to reduce overall residence hall occupancy</li> </ul>
4	Any student can request a single-occupancy room	<ul> <li>Housing assignment policy allows students to elect a single-occupancy option without being cost-prohibitive</li> </ul>
5	All students retuning receive a single-occupancy room	<ul> <li>All students assigned single-occupancy accommodations</li> </ul>

De-Densifying Residential Facilities Tier Assessment:

## **Diagnostic Scoring Sheet**

Use this page to plot your capabilities across each of the seven strategies. Higher numbered tiers correspond with greater maturity. There is a varying number of tiers per strategy to reflect the unique capability curve of each strategy.

Use the results to confirm your institution is cognizant of the practices it is choosing to adopt, based on risk tolerance, resource constraints, and public health guidance.

Upon completion of the diagnostic, reach out to your strategic leader (Brett Schenkel, BSchenkel@eab.com), who will arrange a conversation with EAB's repopulation experts to discuss your institution's assessed readiness and recommendations for

### Capability Tiers for Key Mitigation Strategies
